2017

Create a new outdoor experience

DOOR SLIDE

CHARACTERISTICS

- 10mm tempered glass panels
- Perimatriral guide rail system
- Locking system
- Easy slide mechanism
- Door Handle
- Integrated drainage system

ADVANTAGES

Complete insulation
Ideal for AC or heating
Clear view, no aluminum frames
Leaving the space open
No hanging, no weight to the frame
Many combinations
Made to measure

Door Slide is a frameless sliding glass panel system, ideal to close and protect vertically openings of outdoor areas that require protection form any weather conditions.

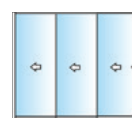

The system is fixed inside the frame (aluminum, steel, concrete etc) with runners on all four sides. At the bottom runner there is also a specially design drainage system, making Door Slide completely waterproof.

There are two different models. The 3 way runner and the 5 way runner. Below are the different configurations provided. Dimensions are always made to measure

Integrated drainage system

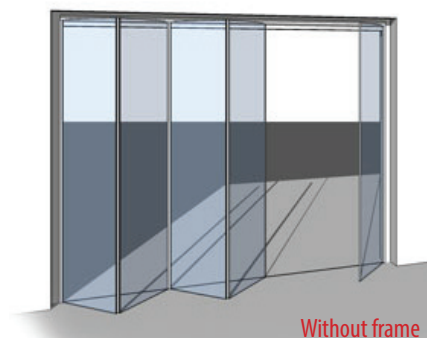

Door Fold is a frameless folding glass panel system, ideal to close and protect vertically openings of outdoor areas that require protection from any weather conditions.

The system is fixed inside the frame (aluminum, steel, concrete etc) with a top aluminum runner. At the bottom the system is completely free, allowing easy passage. There are two different models. The folding and the bi-folding with hinges. Below are the different models. Dimensions are always made to measure.

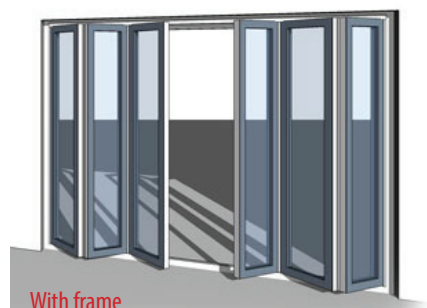

FOLDING MODEL

BI-FOLDING MODEL

Without frame

With frame

CHARACTERISTICS

- 10mm tempered glass panels
- Top guide rail system
- Locking system
- Easy slide mechanism
- Door Handle

ADVANTAGES

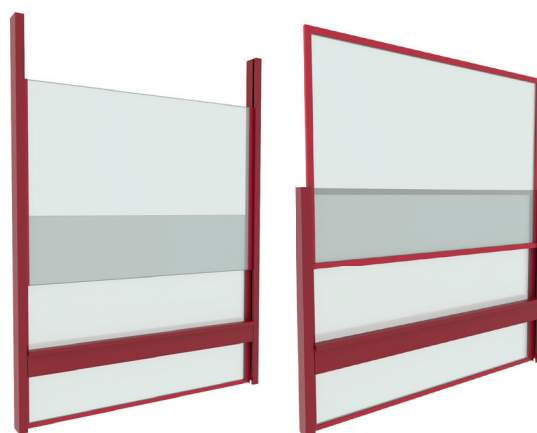

Ideal for AC or heating
Clear view, no aluminum frames
Leaving the space open
Many combinations
Made to measure

Door Fold models are operating with a hanging mechanism and always require steel or concrete supporting frame.

High Low is a retractable glass system designed to protect shaded areas from wind, cold and heat. The operation is manual with counterweights, or with electric motor. There is always one fixed panel at the bottom and another one or two are retracting downwards with no effort at all. HighLow is available in two models: FREESTANDING / TELESCOPIC BUILT-IN MANUAL / ELECTRIC Dimensions are always made to measure.

FREESTANDING / TELESCOPIC MODEL

FREESTANDING
With standard 8X4 pillars and 10mm tempered glass. Structure always without frame.

TELESCOPIC
Without pillars and 6mm laminate top glass and 8mm tempered bottom glass. The retractable panel has always a thin aluminum frame.

CHARACTERISTICS

FREESTANDING

- Ideal to protect open areas or areas shaded with parasols and awnings
- Create an elegant glass fence
- Protect from strong wind
- Adjustable at any height
- Made to measure

BUILT-IN

- Total closure, perfect to use them in AC areas
- Easy slide mechanism for smooth retraction
- Frameless panels that do not interrupt the view from inside
- Adjustable at any height
- Made to measure

BUILT-IN MANUAL / ELECTRIC MODEL

With or without motor, in 2 or th3 panels and 10mm tempered glass panels. The panels are frameless and the counterweights are integrated inside the vertical guide rails.

Electric models are operated by Somfy motors
